Arlee Tripaldi  
Eagle Signal Controls  
736 Federal Street  
Davenport, Iowa

Dear Mr. Tripaldi,

This letter is to inform Eagle Signal Controls Corporation, Davenport Iowa, on the present status of the industrial hazardous waste streams generated at said facility.

Final results of the E.P. Toxicity analysis have been completed and of the sixteen waste streams, fifteen are classified as hazardous waste.

In reference to the conference of 2/23/84 between representatives of Eagle Signal and E.S.G. Watts, all Data Profile Sheets and Waste Product Records have been completed and submitted towards supplemental permits at the appropriate disposal facility. Please note that the length of time between submitting and approval of waste to be permitted under the E.P.A. Federal and State regulations can take between 30 and 90 days, ( 40 CFR Environmental Protection Agency Act).

Transportation arrangements will be met as soon as the permits are approved and accepted.

Should you have any questions regarding the mentioned procedures, please telephone.

Sincerely

ESG WATTS, INC.
